CPAlead Widget Setup & Installation Guide

part 3 of 3 of the entire installation process

- 1) You need a [CPAlead](#) account (if you havent figured that out by now!)
- 2) Login & Click the WIDGETS tab
- 3) Click Create New Widget and select VIRTUAL CURRENCY and continue. Select a skin to use. Continue.
- 4) Monetization method: Continue (no changes)
- 5) Check AUTOMATIC Crediting (instead of manual crediting)

For **Your Server's URL:** enter the URL to where /cpa/pb9.php is on your site – aka <http://www.mysite.com/fbapp/cpa/pb9.php>

Edit /cpa/pb9.php and where it says \$YOURPASSWORD = “password”; - change “password” to something unique and save that file.

Also, in /cpa/pb9.php – edit your correct Database connection information (again, sorry – its a must) (DBNAME, DBUSERNAME, DBPASS)

Put that Password you just set in Postback Password (below

Your Server's URL: when creating the widget).

For **Currency Name:** put tkts or Tickets (Tickets is a bit long, seems to mess up the format when displaying surveys, tkts works better)

For **Currency Ratio:** Put 1 = \$1.00 US (default is **10**, change that to **1**) – FYI: \$0.38 offers, etc. round up – they get 1 ticket for completing them.

6) Continue..

For **Banner Text:** put whatever you like. Example “Earn Tickets – AutoLotto”

Continue

Continue

Name your widget, the continue. Then click **I agree, Create this widget.**

Check “Page Load” for how you want the widget to appear, then click “Generate Code”.

Grab your widget URL from the code below (between the src= quotes – EXAMPLE WIDGET URL (must be correct!):

[http://www.cpalead.com/mygateway.php?
pub=32987&gateid=OTQ4MDM%3D](http://www.cpalead.com/mygateway.php?pub=32987&gateid=OTQ4MDM%3D)

Copy your widget URL only (should look like the URL above but with slightly different values...your unique

publisher id and widget id.)

8) Edit **/connect.php** on your site (where the script is installed) and enter YOUR widget url (gotten above) instead of the current one there, for \$gatewayurl = “”;

Then the changes to save **/connect.php**

You're now officially DONE setting up your application! Access it via your canvas page URL you set up (ex: <http://apps.facebook.com/autolotto/>) – if you're logged in on the Facebook account that you set for the Admin ID, you will see an “Admin” postit icon on the main app index page, click it for the admin panel! (no logging in or anything :P)

Now you can have fun! Change your logo, edit the text, customize it, promote it from the get go, whatever you want! If promoted right, this can and will be the best viral, money making business investment you have ever made.

Best of luck to you and your brand new application!
